1. Create an IAM user with programmatic access only, download the access key and secret key, and document the steps with screenshots.Then set up a billing alert for the account so that an email is received when the Free Tier limit is about to be crossed.

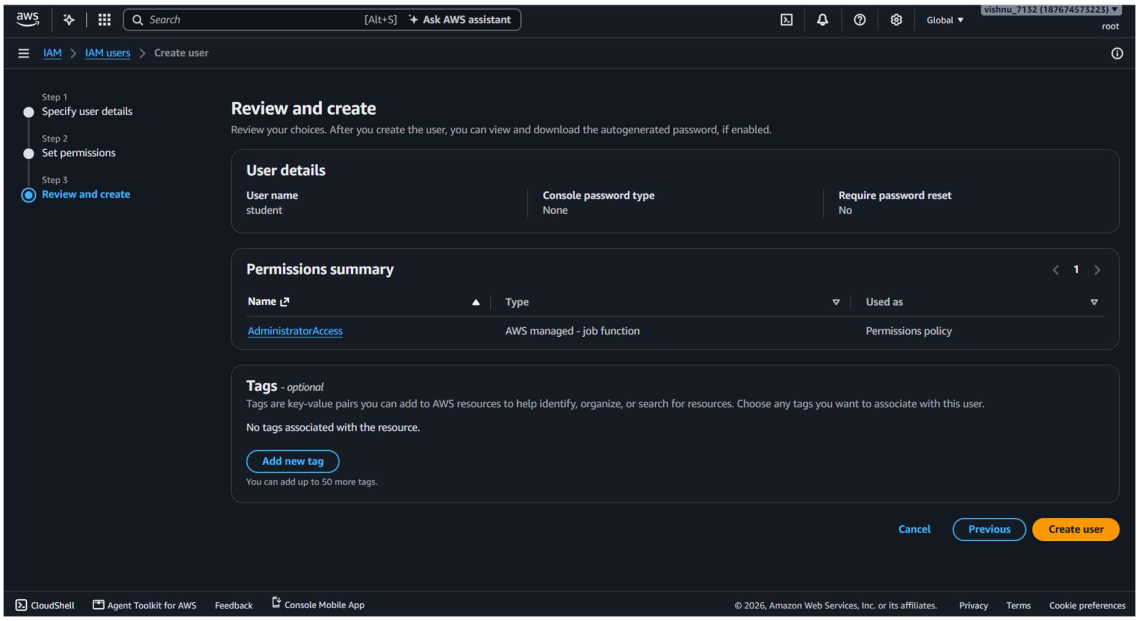

2.Opened the AWS Management Console to access the available AWS services.

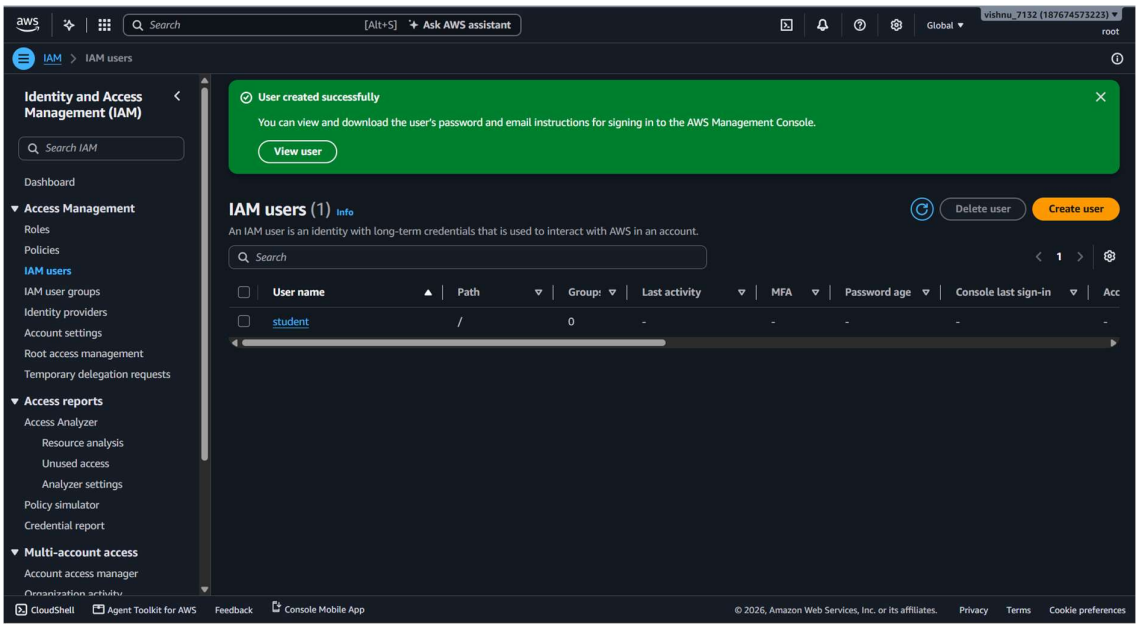

3.Navigated to the IAM Users section to create a new IAM user.

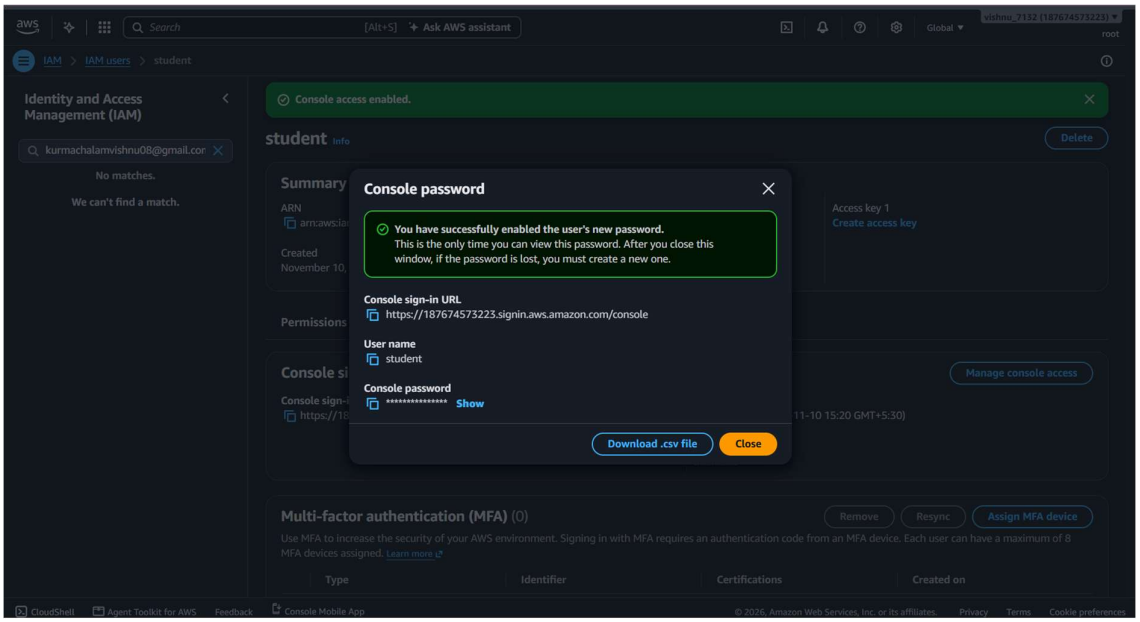

4.Entered the IAM user details and configured the required permissions.

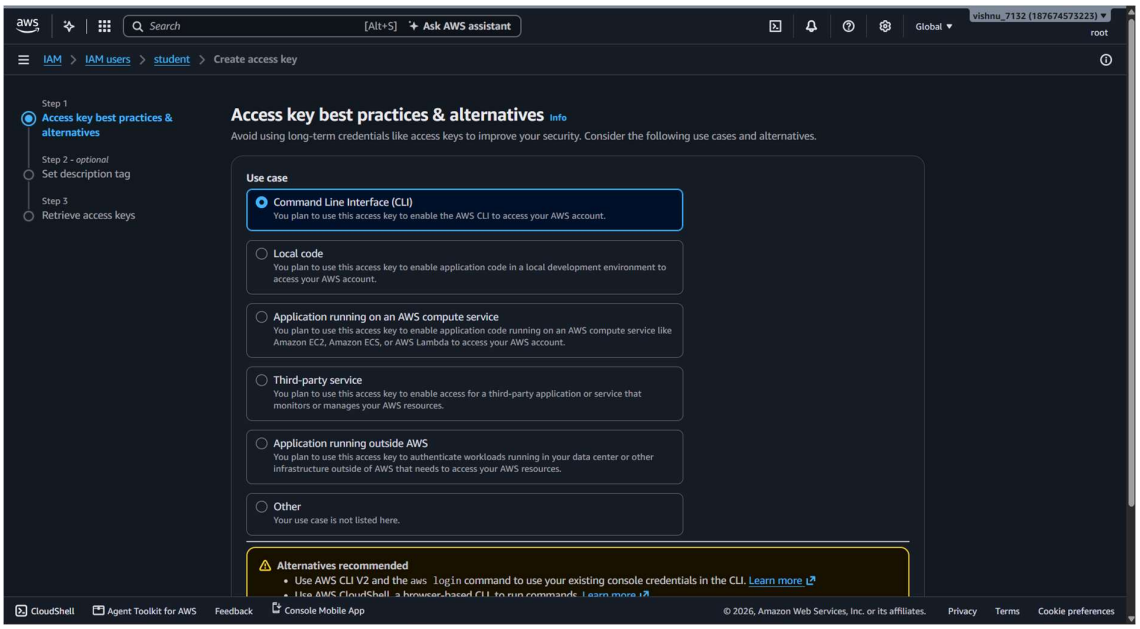

5.Successfully created the IAM user and verified the user details

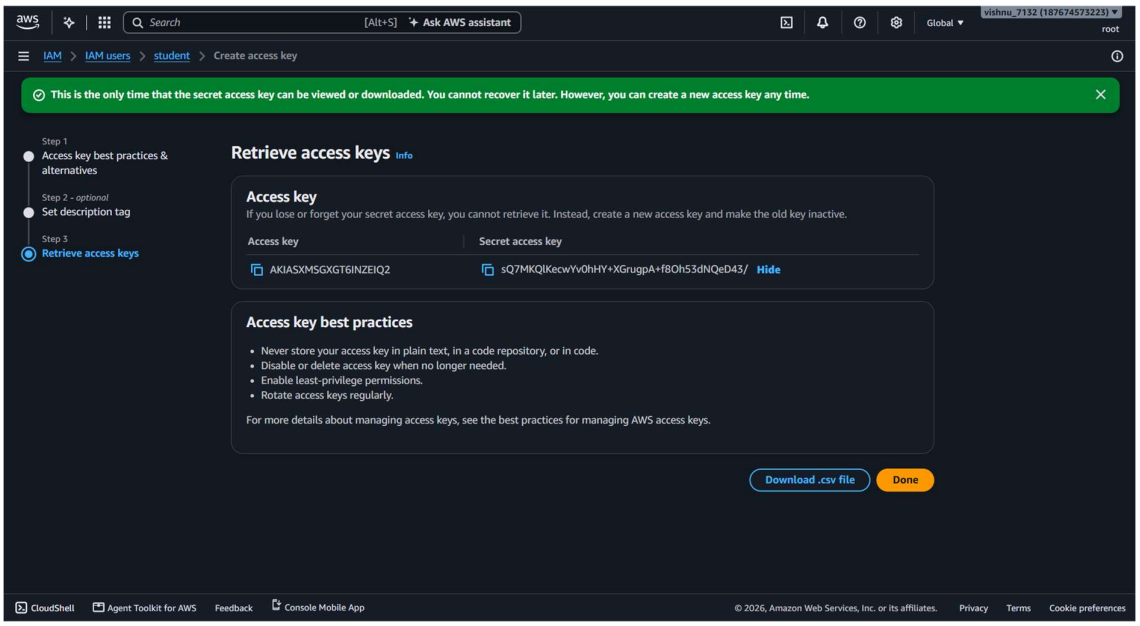

6.Opened the AWS account menu to access account and security settings.

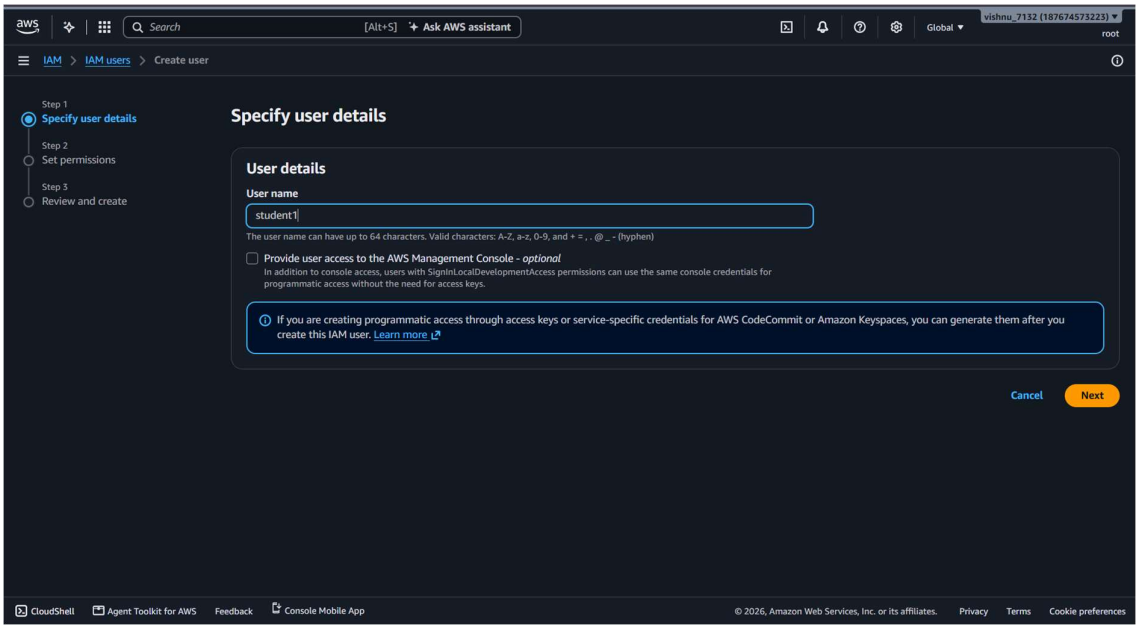

Viewed the IAM user details and checked the available security credentials.

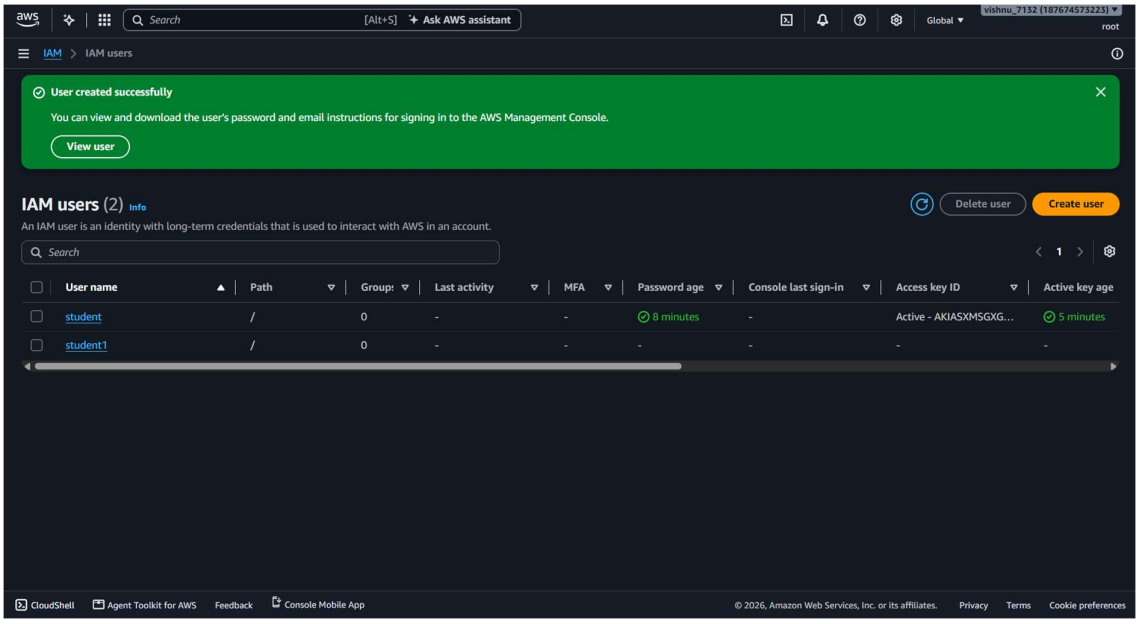

Checked the IAM user's security credentials and related settings.

The user name can have up to 64 characters. Valid characters: A-Z, a-z, 0-9, and + = , . @ _ - (hyphen)
Provide user access to the AWS Management Console - optional
In addition to console access, users with SignInLocalDevelopmentAccess permissions can use the same console credentials for programmatic access without the need for access keys.
If you are creating programmatic access through access keys or service-specific credentials for AWS CodeCommit or Amazon Keyspaces, you can generate them after you create this IAM user. Learn more
